

Objective

To outline the rules governing the Port of Virginia Truck Reservation System. The PRO-PASS Truck Reservation System is a comprehensive motor carrier truck scheduling solution that allows the Port of Virginia to optimize gate and yard operations, reduce trucker turn-time, eliminate trouble cases, and reduce congestion within the Port.

The PRO-PASS Truck Reservation System will give trucking companies the opportunity to schedule terminal visits using an integrated platform capable of instantaneous feedback. Reservations booked through the PRO-PASS Truck Reservation System are initially verified by the terminal operating system against current business rules and then further validated by an ILA Clerk. Through the ILA clerk validation process, reservations are inspected and created through the automated gate system workflow. Upon completion of the pre-validation workflow, reservations are created, by ILA clerks, in the terminal operating system.

Frequently Asked Questions

What are the mandatory reservation hours at NIT and VIG?

Mandatory TRS hours at Norfolk International Terminal (NIT) and Virginia International Gateway (VIG) will be enforced at gate opening. Non-mandatory reservation periods are offered at both marine facilities.

To find the mandatory reservation and non-mandatory hours for each terminal, please refer to the Port of Virginia website below.

[Port of Virginia Terminal Gate Hours](#)

Future expansions will be communicated in advance.

How far in advance can I create a reservation?

A reservation can be created 48 hours in advance of a given time window. This includes the creation of reservation for the current day and reservations for subsequent days.

How do I sign up for the Truck Reservation System?

The Truck Reservation System is available to trucking companies through the PRO-PASS website (www.propassva.com).

How are reservation time slots defined?

For each reservation, a time slot must be selected. Reservation time slots are established in standard hourly increment with each slot beginning at the start of the hour. In addition to the standard time slot hourly window, a grace period has been established at the beginning and the end of each hour. The current grace period is 30 minutes.

Which selection should I choose when making a reservation?

- Pick Import – retrieval of an import container only
- Pick Empty – retrieval of an empty container only
- Pick Dray – an export due to depart via gate (must be setup by the shipline)
- Drop Export – an export due to depart via vessel
- Drop Empty – an empty due to return to the marine facility
- Drop Dray – imports that have departed from one marine facility and will re-ingate at another marine facility

Dual transactions can be completed at both marine facilities.

How will the Port of Virginia prevent a single carrier from monopolizing all available reservations for a given time slot?

Through monitoring and analyzing trucking company usage statistics. The PRO-PASS Reservation system is highly configurable. Should a need arise, limits to the number of reservation slots can be established.

How will the Port of Virginia handle queuing at the port?

No truck queueing will be permitted prior to the opening of the OCR portals.

Drivers arriving too early for confirmed reservations (more than 30 minutes prior) will be turned away and not be permitted to queue on terminal property. Drivers arriving late for confirmed reservations (more than 30 minutes after the on hour block) will be turned away and may only return when unrestricted gate hours are resumed, or a new reservation has been secured. Trucks arriving during mandatory reservation hours, without a reservation, will be turned away and not be permitted to queue on terminal property.

Drivers should refer to the designated queuing area.

How will the Port of Virginia handle last free day reservations?

Users of the PRO-PASS reservation system will be able to make reservations for any import container that is AVAILABLE and in a deliverable position. The ocean carrier should be contacted for last free day information. A rejection message will be received for any reservation with a last free day issue.

What happens if a truck misses a validated reservation?

The reservation will convert to a “missed” status. The slot that was held for the reservation will go unused. The missed status will be recorded against the truck and the trucking company.

Excessive “missed” reservations may result in reduction of access to mandatory reservation hours

How will the Port of Virginia handle truckers who consistently miss their reservation?

The Port of Virginia is committed to producing an efficient, best-in-class Truck Reservation system. The Port of Virginia recognizes that missed reservations impact the port’s potential throughput.

The community goal for missed reservations is no higher than five (5) percent. Motor Carriers are responsible for reviewing their weekly missed reservation statistics through Reservation Moves and/or Reservation Visits and those carriers that exceed this percentage point consistently, will be notified with a probation notice. Chronic missed reservation behavior may result in reduction of access to mandatory reservation hours.

The Port of Virginia will produce statistics, to specific carriers, on trucking company reservation system effectiveness, to include missed reservations.

How many reservations will there be per time slot?

The total number of reservations per time slot will be based on the specific operating model of each terminal. Capacity is derived at the yard block level. Each block has a defined capacity for export, import, and empty container moves. Once the capacity for exports, imports or empties has been met for a given hour, that slot will no longer be viewable for selection.

The capacity will vary by terminal, operating mode, equipment availability, and weather conditions.

Is license plate number required when making a reservation?

Yes, license plate numbers are required when securing a reservation. Each license plate is directly linked to its corresponding PRO-PASS RFID tag. The PRO-PASS RFID tag is used to automatically identify each truck as it enters NIT or VIG. The PRO-PASS RFID tag, once registered, can take up to 45 minutes to process.

Will PRO-PASS RFID Tags be required to access the terminal during the non-mandatory period?

Yes, PRO-PASS RFID tags will be required to access the terminal during the mandatory and non-mandatory period. Transcore RFID tags will no longer be supported. PRO-PASS RFID tags can be ordered through the PRO-PASS website (www.propassva.com). PRO-PASS RFID tags can be shipped to you directly or retrieved from NIT North or VIG Driver's Assistance Buildings.

Driver's Assistance Building - North Gate
7737 Hampton Blvd. Norfolk, VA 23505

** The NIT Driver's Assistance Building is located next to the Pass Office/NIT Police Headquarters**

Will I be able to change a truck license plate for an existing reservation?

Yes, license plates for any given reservation can be edited prior to arrival and before the end of the reservation hour. The "Edit" and "Check-in" action options can be used in these instances. The "Check-In" action button, allows edits or changes to a license plate or already existing empty container reservation within the last 30 minutes of the reservation hour. This excludes the late grace period.

Will I be able to cancel an existing reservation?

Yes, PRO-PASS users must cancel reservations prior to the 59 minute mark within a reservation time-slot. However; it is highly recommended to cancel as soon as possible, in order for the slot to be re-allocated for use. This includes "trouble" status reservations.

Can I add an additional transaction to a single move reservation?

Yes, you can add to an existing reservation, if there are available slots for the additional move type. Adding an additional move may cause the time of the reservation to change. Additionally, you can remove a move from an existing dual reservation.

Can I make a “generic” reservation?

Yes, you can create a generic “Drop Empty” or “Drop Export” reservation without a container number; however, the container number for an export reservation is required to be updated, prior to the driver’s arrival to the marine terminal. By not doing so, this will cause a carrier’s reservation to update to “trouble” status, and subsequently “missed,” until corrected. It is strongly recommended that the container number is also updated for empty reservations, in order to be made aware of shipline “No Entry” holds.

Does a reservation guarantee chassis availability?

No, a reservation does not guarantee chassis availability.

Am I required to create reservations to take a chassis in or to take a chassis out?

Chassis reservations are not supported in PRO-PASS. A reservation does not guarantee chassis availability.

Will I be able to create reservation for Reefers?

Yes, reservations for all container equipment types are supported. Reefer reservation information will be shared with M&R vendors.

Will reservations be required for Break Bulk, OOG or Cargo operations?

Reservations for Break Bulk, OOG, or Cargo operations are not required through the PRO-PASS system; however, please adhere to current terminal-specific OOG or Cargo operation policies.

Will a truck be allowed to enter the terminal with a reservation in trouble status?

No, the mandatory reservation period is reserved for validated reservations in good standing. Drivers with a reservation in trouble status must have the status resolved prior to arriving at the terminal. Issues related to the trouble status should be adjusted or canceled, prior to the expiration of the reservation hour.

What happens if the Early Return Date (ERD) / Begin Receive Date (BRD) for an export changes and a reservation has already been established for the next day?

Current Early Return Date, or ERD, policy still applies. If the ERD changes, the reservation state will change to “trouble” and an email notification of the change in status, will be sent automatically to the administrator of the motor carrier’s PRO-PASS account. Please contact the shipline or the Port of Virginia’s Customer Service team Povcustomerservice@vit.org for assistance.

Note: The Begin Receive Date is sometimes referred to as an Earliest Receive Date, Export Receive Date or Early Return Date (ERD).

Can a reservation be made for a container that is not AVAILABLE?

No, reservations can only be made for containers that are AVAILABLE and are located in a deliverable position in the yard.

Can I make a reservation for a container that is still on a vessel?

No, reservations can only be made for containers that have a valid and deliverable yard position.

Can a driver be associated with more than one SCAC code?

Yes, a license plate can be registered to more than one trucking company's Truck Management console.

Can I create dual mission reservation for one SCAC code inbound and a different SCAC code outbound?

No, only one SCAC code per reservation visit is allowed. A separate reservation for the outbound move for the secondary SCAC code would need to be created. Please note that different time slots for each SCAC code must be selected.

Key Points to Editing Reservations

- Edits should be completed prior to the 30 minute mark within a reservation time-frame, in order to retain the reservation time slot
- Cancellations should occur prior to the 59 minute mark within a reservation time-frame
- Reservation status will update to missed 30 minutes after the reservation time-frame
- Drivers can enter no earlier than 30 minutes prior to the reservation time-frame and not later than the 30 minutes after the reservation
